709	Sea: Boat		General vicinity	40.41	-72.48	Aboard USCG Cutter Adak, about 18 NM SSW of Shinnecock Inlet	According to Witness 711, the Adak spent about 30 minutes underway at about 30 knots to reach the accident site. According to the USCG Group Moriches Chronological Case Log for the evening of the accident, the Adak reported in position 40 degrees, 38.37 north latitude, 72 degrees, 38.47 minutes west longitude at 2047 local time. Recorded primary radar data show an approximately 30-knot track arriving at the specified location about the specified time. This track, which is picked up on radar about 3 minutes after the last transponder return from flight 800, is believed to be the Adak. Consequently, the Adak's position at the time of the accident was approximated from the available radar data.
